5. CAT SHEET

The CAT sheet analysis highlights the following key points:

- The CAT sheet indicates a high probability of default (85.2%), primarily driven by the GST mismatch and lack of income tax filing.
- The data quality score of 88 suggests a moderate level of confidence in the information provided.
- The recommended loan amount is 0, indicating a cautious approach due to the elevated risk factors.

6. CORPORATE GUARANTOR

The corporate guarantor, if applicable, is not mentioned in the provided data. Further details are required to assess the strength of the corporate guarantor.

7. GROUP ANALYSIS

Group analysis is not applicable as the requested loan amount is 0.

8. VISIT REPORT BY CREDIT ANALYST

A physical visit to the customer's premises was not conducted due to the high fraud risk and probability of default.

9. CONDITIONS FOR APPROVAL

1. Application Rejected. Key reasons: High fraud risk detected, High probability of default (85.2%), Elevated public risk signals. The current risk metrics exceed the acceptable threshold for sanction.

The decision to reject the application is based on the significant fraud risk, particularly the GST mismatch, and the high probability of default. The lack of income tax filing and other compliance concerns further contribute to the elevated risk profile.
